Title Screen

Japan	US/Europe
	

The name and dancing Mario were both changed for the international releases.

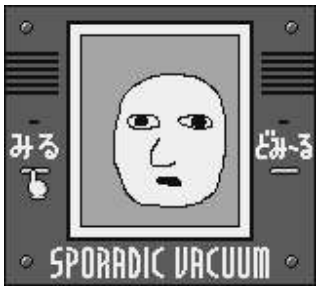

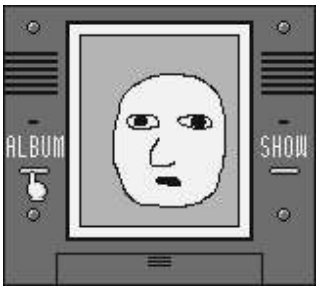

Menus

Main Menu

Japan	US/Europe
	

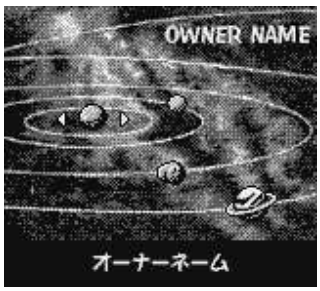

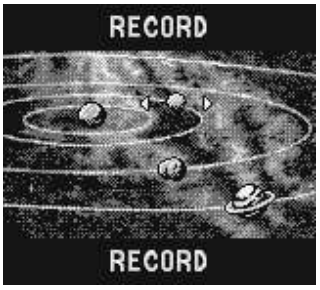

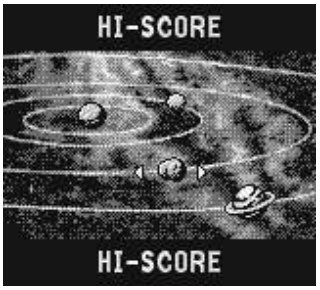

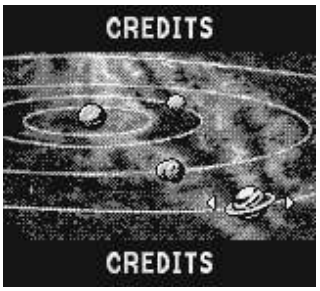

The Pocket Camera logo was removed and *"SHOOT"* and *"VIEW"* switched places for the international releases. The menu names also aren't in bubbles in the international releases and are in rectangles instead.

View

Japan	US/Europe
	

The text *"SPORADIC VACUUM"*, a developer's (Hirokazu Tanaka) nickname, got removed from international releases, probably because most gamers outside of Japan wouldn't know what it means.

Space

Japan	US/Europe	Description
		*"OWNER NAME"* was changed to *"USER NAME"* for the international releases.
		*"REPORT"* was changed to *"RECORD"* for the international releases.
		*"SCORE"* was changed to *"HI-SCORE"* for the international releases.
		*"STAFF ROLL"* was changed to *"CREDITS"* for the international releases.

In the US/European version, the top of the screen is covered with a duplicate of the text (with the black overlay) at the bottom, apparently, because someone was too lazy to bother erasing the text from the background image. The black overlay also means that it is no longer possible to see the top portion of the space background, however the tiles that make up that portion are still present in VRAM; just unused.

Animation

Japan	US/Europe
	

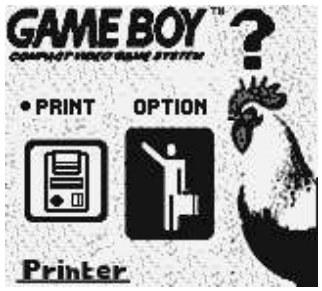

This menu was completely changed for the international releases, with a Western animation style rather than a Japanese anime style.

Link

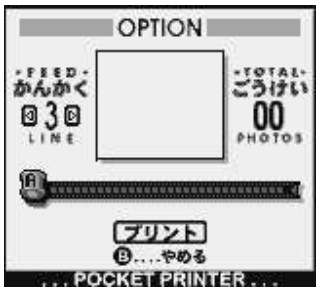

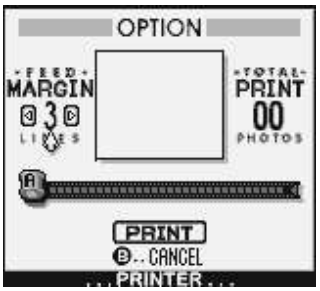

Japan	US/Europe
	

This menu was renamed from *"ACCESS"* to *"LINK"*.

Print

Japan	US/Europe
	

The image of a printer ink refill syringe was changed to an image of the Game Boy Printer, probably to avoid confusion with a medical syringe based on Nintendo's censorship policies. The trademark symbol was moved and made clearer to read.

Japan	US/Europe
	

"LINE" was changed to the plural "LINES". Curiously, the Japanese version already uses the plural "PHOTOS". "POCKET PRINTER" was localised to "PRINTER". There are two ellipsis next to "CANCEL" rather than the original four next to "やめる" probably to account for space. Rather than translating "かんかく" to "SPACE", the English version uses "MARGIN". Additionally, ごうけい means "TOTAL", but to avoid redundancy this was changed to "PRINT".

Japan	US/Europe
	

The screen that appears as a picture is printing was edited slightly. The big "Love" graphic was removed, as was the name of the bear enemy from *Super Mario Land 2* (Tamanoripu).

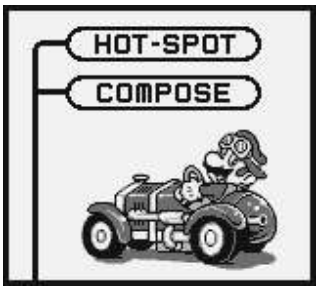

Transfer

Japan	US/Europe
	

The "stand by" screen that appears when transferring pictures between two Game Boy Cameras is different between both versions. The international versions uses art of Peach and Wario from *Mario Kart 64*. In the Japanese version, there is an inverted picture of two people in an Ukiyo style, and Nintendo's first logo and text which translates to "full of ideas". The original Nintendo logo fades in and out.

Nintendo produced various products with Ukiyo-e, primarily Hanafuda playing cards (https://www.wopc.co.uk/japan/ukiyo-e-nintendo). It's unknown if this image is taken from one of their earlier works, but it's entirely possible.

Special

Japan	US/Europe
	

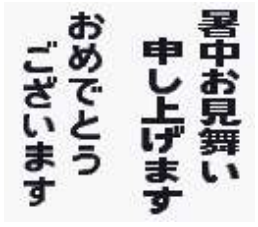

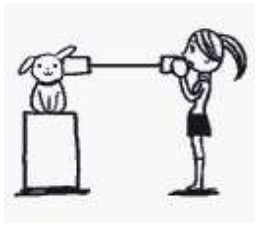

The strange image in the Japanese release was changed to an image of Mario for the international releases.

Album B

These are pictures that come pre-loaded with the device. Since they were all rearranged for the international releases, they've been organized by region exclusives.

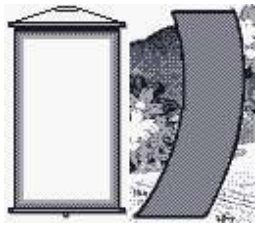

Unlocked

Japanese Exclusive Pictures

Picture	Description
	**B05** A Japanese school timetable.
	**B06** Artwork from one of Nintendo's old Hanafuda cards.
	**B07** On the left, it says "Congratulations". On the right, it says "Midsummer greetings".
	**B08** Translates to "Please wait a moment."
	**B11** A picture of a girl and a rabbit playing with a string phone.
	**B12** Looks like a hot-blooded high school student. He's more or less saying "What the...?!"

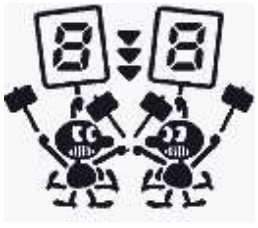

(Translations: RahanAkero, divingkataetheweirdo)

International Exclusive Pictures

Picture	Description
	**B03** A simple gray screen to complement the black and the white ones.
	**B08** The left one is a hanging scroll.
	**B13** This guy appears as a boss in the Space Fever II minigame.
	**B14**
	**B15**
	**B16** Pokémon Blue Charizard and Venusaur with Pokémon Red/Green Blastoise and Mewtwo. A similar picture appears as an unlockable in the Japanese version, except Raichu appears instead of Mewtwo.

Unlockable

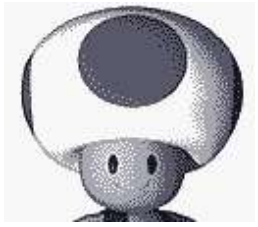

Japanese Exclusive Pictures

Picture	Description
	**B17** Characters from the Game & Watch game *Judge*.

	**B19** Character art of the enemy Tamanoripu from *Super Mario Land 2*. His name is written above him.
	**B22** Pokémon Blue Charizard, Venusaur, and Raichu with Pokémon Red/Green Blastoise. A similar picture appears in the international versions, except Raichu has been replaced with Mewtwo.
	**B23** Pokémon Red/Green Jolteon, Porygon, and Snorlax. Chansey is actually an early version of its sprite from Pokémon Gold, released nearly two years later! The early version seen here can also be found in the game's Space World 1997 demo, dated three months prior to the release of *Pocket Camera*.
	**B24** Pokémon Red/Green sprites of Articuno, Zapdos, Dragonite, and Mewtwo.

International Exclusive Pictures

Picture	Description
	**B17** Character art of Wario from *Wario Land II*.
	**B19** Character art of Luigi and Peach.
	**B22** Package art from an early Nintendo toy, the Space Ball.
	**B23** Characters used for the Game & Watch's alarm function. The trumpet guy is from *Fire Attack* and the bear is from *Lion*.
	**B24** Character art of Small Wario from *Wario Land*.
	**B25** A sketch of Mario, Baby Mario, and Yoshi. The text translates to "super fast camera".
	**B26** A photo of R.O.B.
	**B27** Character art of Boo from *Mario Kart 64*.

	**B28** Character art of Toad from *Mario Party*.
	**B29** Character art of Mario and Donkey Kong Jr. from, well, *Donkey Kong Jr.*
	**B30** Character art of Mario from *Super Mario 64*.

Games

These are a few minigames you can play. They have a "game face" feature that allows you to implant your face into the game. The faces shown here are optional pre-loaded ones you can play with.

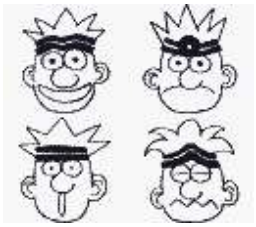

Space Fever II

A supposed sequel to Nintendo's early *Space Invaders* knockoff for arcades.

Japan	US/Europe	Description
		The "II" in the middle of the title graphic was made a bit taller for the international releases.
		This is the first boss of the game. The second one is identical.
		Upon beating the third boss (your own game face), this message is displayed, and the game loops back to the beginning (but a bit faster this time). The grammar in the message was fixed for the international versions.

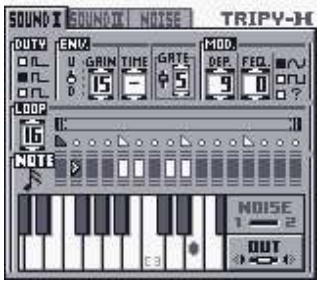

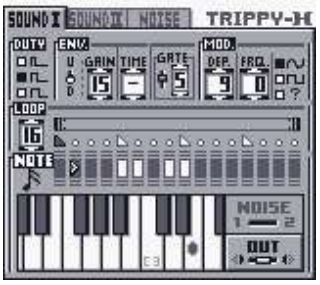

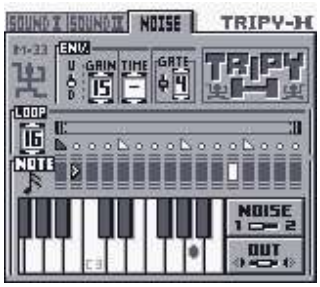

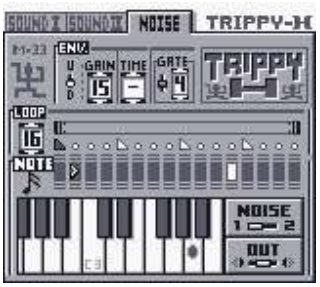

Ball

A remake of the *Game & Watch* game of the same name.

Japan	US/Europe	Description
		This is the first face option.
		This is the second face option.
		The face that appears when you lose got changed for the international releases.

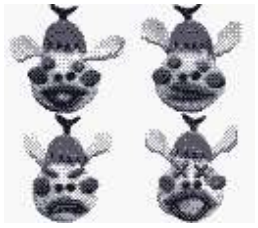

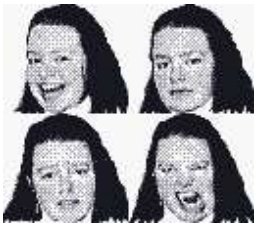

DJ

Not really a game but a music-making application.

Japan	US/Europe	Description
		Some of the main menu's text was changed for the international releases. The Japanese version also starts you off on the "Save Data" icon, while the international versions starts on the "Sample" icon.
		This is the first face option. The second one is identical.
		The name of the program was changed from TRIPY-H to TRIPPY-H. The "frequency" abbreviation was also changed from "FEQ." to "FRQ."
		Another instance of the name change.

Run! Run! Run!

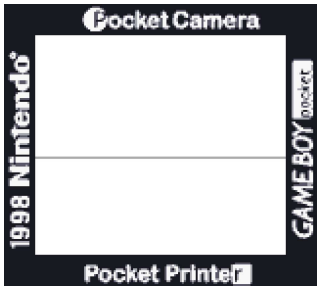

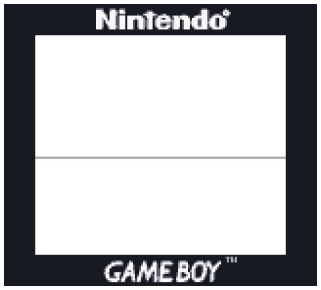

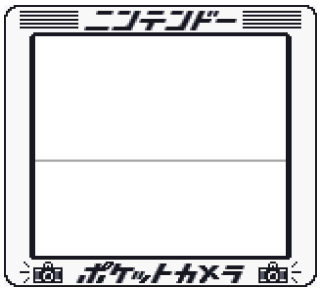

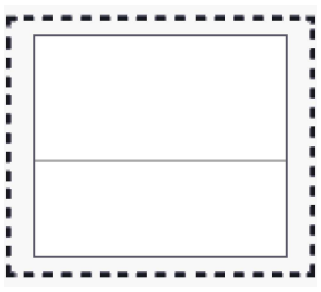

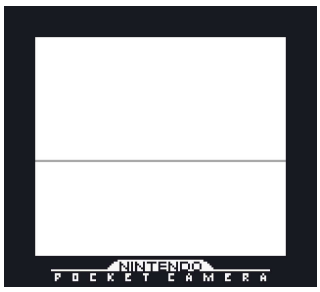

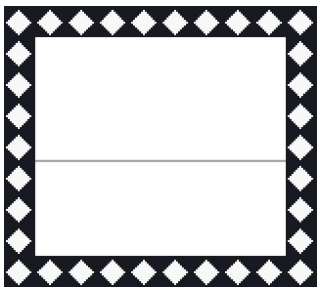

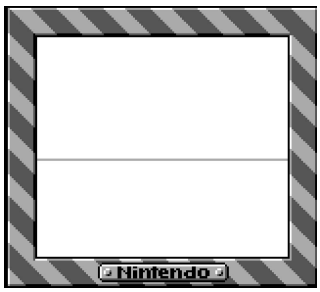

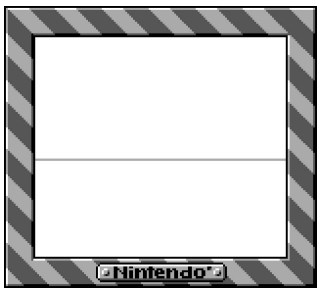

An unlockable game that involves racing a bird and a mole by doing a lot of button mashing.

Japan	US/Europe	Description
		The title screen was completely changed for the international releases and actually represents what the game is about.
		The music that plays on this screen was also changed. In both versions of the game, these two songs can also be heard in the game's Animation mode as song No. 04 (International version) and song No. 28 (Japanese version).
		This is the first face option. The Japanese version reuses a face from *Ball*.
		This is the second face option. The Japanese version reuses a face from *Space Fever II*.

Frames

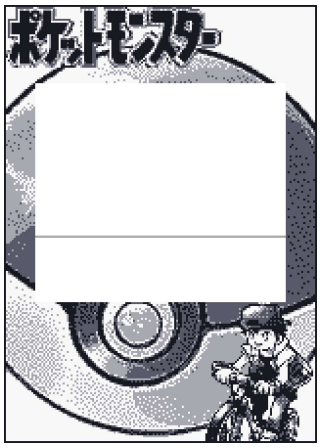

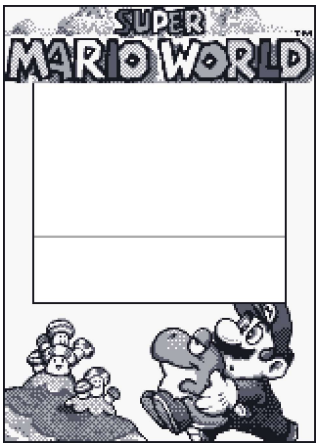

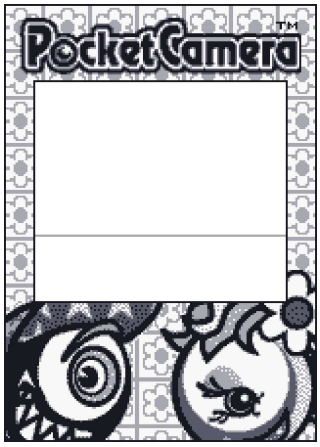

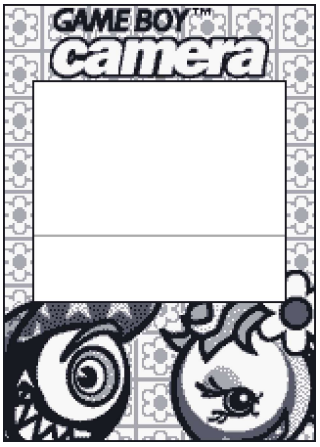

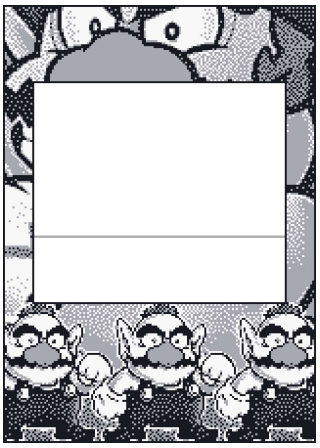

Normal

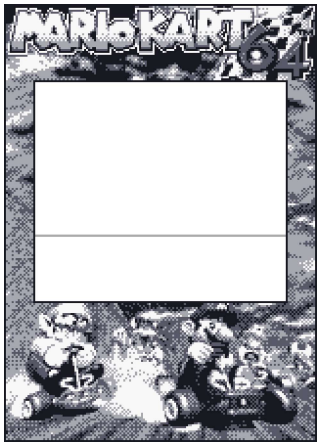

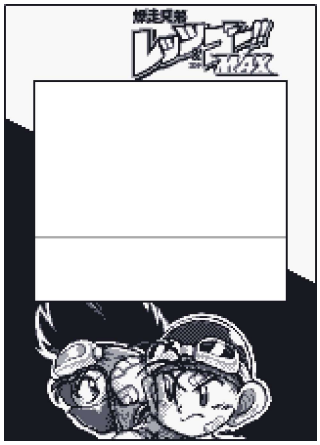

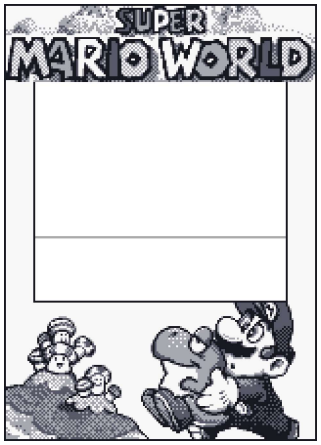

Japan	US/Europe	Description

		**No. 01**
		**No. 02**
		**No. 07**
		**No. 09**

Wild

Tall frames that can only be selected when printing a picture.

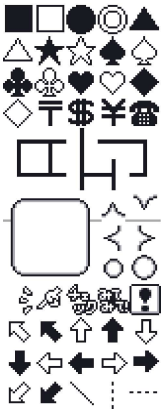

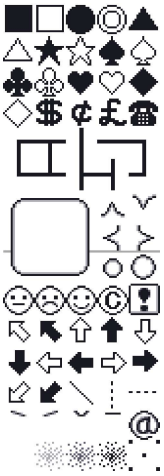

Japan	US/Europe	Description
		**No. 02** A Pokémon frame featuring Red riding a bicycle was changed to a *Super Mario World* frame.
		**No. 03** The Pocket Camera logo was appropriately changed to the Game Boy Camera logo.
		**No. 05** Another Pokémon frame featuring Blastoise was changed to a *The Legend of Zelda: Link's Awakening* frame.
		**No. 06** Yet another Pokémon frame, this one featuring Pikachu and Clefairy, was changed to a *Wario Land* frame. The Pokémon frame may refer to the planned but unreleased *Pokémon Pink.*

		**No. 07** This wild frame is part of the exclusive Coro Coro content. It was replaced with this *Mario Kart 64* frame in the international versions and it is available from start.
		**No. 08** This wild frame is part of the exclusive Coro Coro content. It was replaced with this *Super Mario World* frame in the international versions, which looks similar to wild frame 02, but it has the TM removed from the logo. It is not accessible without hacking.

Stamps

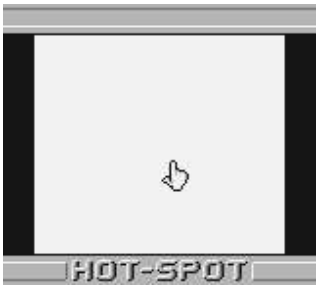

You can paste these into your photos.

Japan	US/Europe	Description
		The "small face" stamps are mostly identical, except for one. A stamp of a bulging eyeball was replaced with a big nose.
		The number of big stamps, however, was considerably reduced for the international releases. The ringed bull nose and curly mustache are international exclusives. The ghost's face was also slightly edited.
		The Pokémon Red/Green stamps were also heavily cut down. The first 10 stamps in the Japanese version are available from the start, while the last 10 are unlocked by scoring 500 points in Ball. Interestingly, in both versions, the Pikachu stamp is actually from the early development of Pokémon Gold, which released two years after *Pocket Camera*. Until the game's Space World 1997 demo was leaked onto the internet in 2018, this connection was completely unknown, as its sprite was completely redrawn between the demo and the final game.

x		These Mario stamps are exclusive to international releases.
		The Japanese postal marker (〒) and yen (¥) stamps were removed. There are now stamps for the cent sign (¢) and pound sign (£). Specifically, the stamps in the fourth row (top to bottom) 〒$¥, become $¢£. Four stamps from the Japanese version (from left-to right), were originally three particles (suggesting the player should look where the glove is pointing), a pointing glove, "check" (チェック) and "look, look!" (みてみて！). These were replaced with indifferent, sad, happy faces and the copyright symbol (©) respectively. Two rows of stamps were added to the bottom of the symbols stamps for the international releases. Row one: Some small stamps occuping only the top portion of the tile space; two diagonal lines (lower and upper respectively), a curve, a straight line, as well as an at symbol (@). Row two: four spray-paint like effects (lighter (completely white) through to darker), and possibly the five dot punctuation symbol (⁖).

Misc

Hot-Spot

Japan	US/Europe
	

The text *"PICTRIP"* was changed to *"HOT-SPOT"* for the international releases.

In the Japanese version, if you press **B** while a song is playing, the music will continue to play outside of the Hot-Spot selection menu. The international versions will stop the music after exiting the menu.

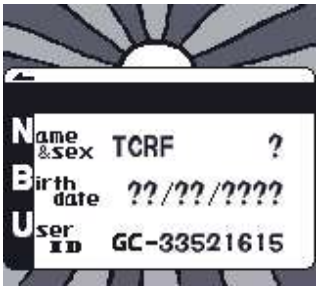

If you attempt to set a Hot-Spot in any of the Album B pictures, only the exit menu will appear. GameShark code **`01??D8D5`** **ID `1E-3B`** will allow you to access the Album B photos.

Error Faces

Two of the three faces that appear when an error happens (or when you select Run in one of the menus) were changed for the international releases.

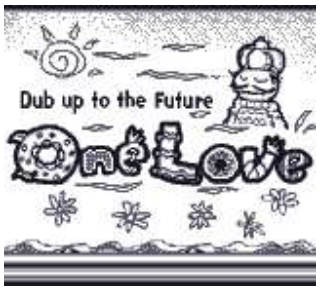

Japan	US/Europe
	

User IDs

Japan	US/Europe
	

The Japanese User IDs begin with *PC*, e.g. *PC-12345678*, but in the international releases the *PC* was changed to *GC*, e.g. *GC-12345678*, because of the device's regional name change. The Japanese version allows you to record your blood type. Interestingly, the Pocket Camera logo was outright removed instead of being replaced with the Game Boy Camera logo as seen in previous examples.

Credits

Japan	US/Europe
	

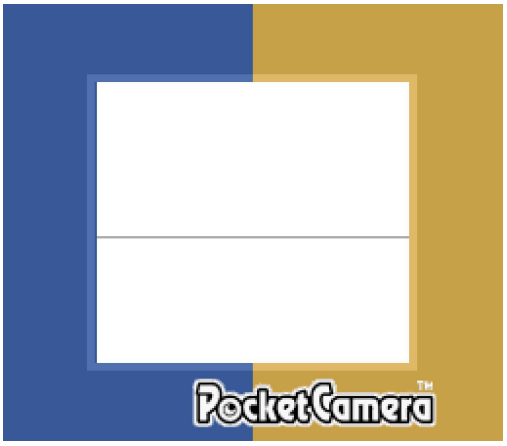

The intro animation of the credits was changed to scenes from *Sheriff* for the international versions.

Japan	US/Europe
	

The sentence "Don't butter me up!" was removed from the ending picture of the (real) credits sequence.

Super Game Boy Borders

The logo on the border for the Super Game Boy has changed accordingly.

Japan	US/Europe
